MEDIZINTECHNIK

# Tunneling Instrument Kit

Tunneling instruments are designed for blunt split flap preparation of the buccal soft tissue, to prepare the tunnel for inserting a tissue graft. The gingivectomy knives are produced with extra long and slim working parts and are used to extend and mobilize the mucoperiosteal pocket. The toothed version especially reduces the risk of perforation when dissecting the supra-periost.

**Kit Contains**

3189 Tunneling instrument straight

3190 Tunneling instrument angled  
8337 Tunneling instrument angled,  
4,5 mm
